

Geokinetics is dedicated to achieving and sustaining excellence in every facet of its operations.

To achieve and sustain excellence, Geokinetics will devote the necessary resources to develop a company culture in which operating with integrity is expected from each individual.

Operating with integrity includes:

- ✓ The mandate to protect the health and safety of all workers, contractors and third parties exposed to activities conducted by the company, while protecting the environment.
- ✓ The mandate to follow all laws, regulations, industry best practices, internal guides and codes of conduct at all times.

Geokinetics will implement, maintain and improve an operating management system that integrates Quality, Health, Safety and Environmental management seamlessly with all business activities at all levels and in all regions.

The system will revolve around four fundamental principles:

Leadership
Risk Management
Continuous Improvement
Implementation

Management, workers and contractors at all levels will commit to ensuring this culture is developed and maintained to enable safe, reliable, and sustainable operations that are evaluated regularly and improve continuously. This will be done by:

- ✓ Accepting responsibility for protecting themselves and others.
- ✓ Taking responsibility to intervene or stop unsafe work to prevent injury or harm to the environment.
- ✓ Actively participating in the reporting and investigation of all incidents, hazards and near misses that have the potential to impact the operation.
- ✓ Continuously search for opportunities for improvement.

Geokinetics recognizes that all incidents are preventable.
